

## **Exceed/Prosched Display Problem For ProHelp Millennium Resolution**

### **1. Overview**

Executing Prosched from an Exceed (version 6.0.0.0) workstation may cause the graphical representation of the schedule to remain blank until the Prosched window is resized or scrolled. This document contains the Exceed settings to correctly display Prosched.

### **2. Exceed Settings**

Under Exceed/Xconfig/Performance, select the following:

System Resource Usage: 0

Maximum Backing Store: Always

Default Backing Store: When Mapped

Minimum Backing Store: When Mapped

You must restart Exceed for the changes to take affect.

### **3. Potential Problems**

Utilizing backing store will use more memory for drawing applications, which includes Prosched and other charts. Please be aware of this limitation.
